

4sustainability® is the Process Factory mark highlighting the adherence of textile and fashion & luxury companies to the sustainability roadmap. The implementation of each roadmap initiative is verified and measured annually based on a structured protocol of activities.

Fasac Spa
has joined the 4sustainability® Commitment
and applies the Chemical Management Protocol
for eliminating toxic and harmful substances in production
through the ZDHC MRSL.

IMPLEMENTATION LEVEL

AUDIT DATE: 11/02/2021

VALID UNTIL: 31/12/2022

4S REPORT CM v. 3.0

ASSESSMENT ABSTRACT OF THE IMPLEMENTATION LEVEL

Fasac Spa

PROTOCOL REQUIREMENTS of 4SUSTAINABILITY CHEMICAL MANAGEMENT

1. Management system for the MRSL implementation

Evaluating the implementation of a chemical management system within the company. The verified requirements range from the presence and communication of an internal sustainability policy, to staff training, to the adoption of the ZDHC MRSL and recognized certification standards, as well as to the definition of reduction targets and monitoring of over-time performance.

2. Suppliers management

Assessing the company's supply chain management. The verified requirements measure the mapping activity, qualification, involvement, training and monitoring of suppliers. Furthermore it oversees the correct functioning of the procedures aimed at ensuring the choice of raw materials/chemicals/processes only from qualified suppliers.

3. Raw materials management

Assessing the management and control system of incoming raw materials and their compliance level with 4sustainability PRSL, as a tool for reducing the risk of incoming contamination in the production process.

4. Chemical product management

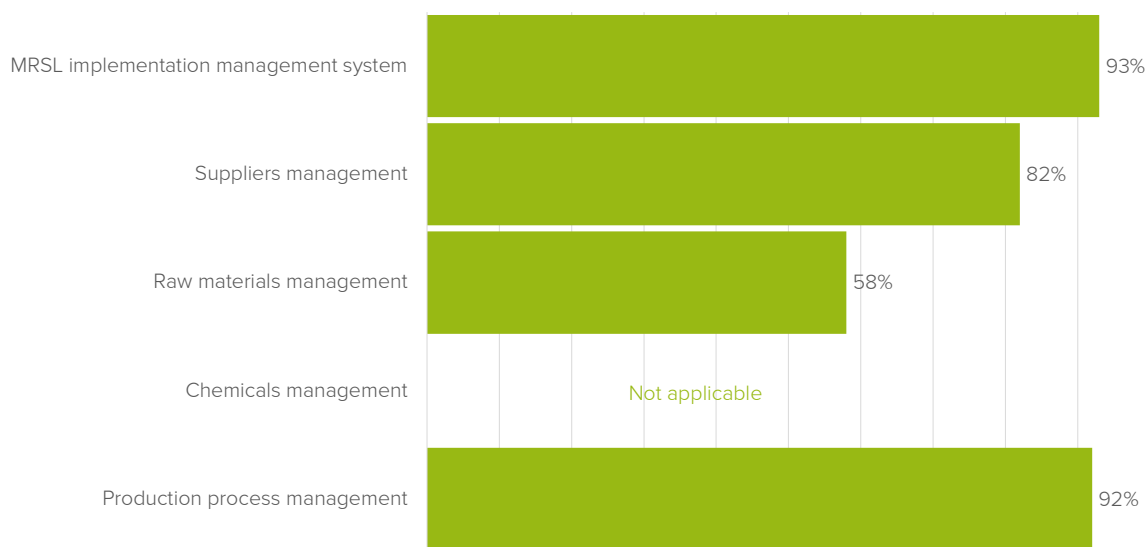

Assessing chemicals management within the factory. The verified requirements measure the level of guaranteed traceability, the qualification level of the chemical products with the ZDHC MRSL (through positive lists, certifications, ZDHC Gateway and testing), the results obtained from the waste water as well as the correct identification, handling and products storage.

5. Production process management

Assessing the production processes management and traceability. The verified requirements measure the correct functioning of the internal traceability system and its digitalization. Moreover the correct monitoring of output contamination from the production process is verified. It included product due-diligence and wastewater tests in order to monitor any sub-contractors, according to ZDHC Guidelines.

Environmental, health and safety profile: 4sustainability protocol does not provide a direct verification of the legal requirements defined by current environmental, health and safety regulations. It requires the company to complete a questionnaire for a compliance self-declaration (available on request).

REQUIREMENT LEVEL OF IMPLEMENTATION - 4S CM PROTOCOL

TOTAL IMPLEMENTATION LEVEL:

AUDIT DATE: 11/02/2021

PRODUCTION MODEL

The company processes and sells fabric.
The company does not carry out any internal process
and outsources processes of printing and finishing.

Name of Internal Chemical Manager: Rossana Piacentini, Greta Saraceno
ZDHC accredited training course and date: Top10 and Base, last in 09/2019

INPUT

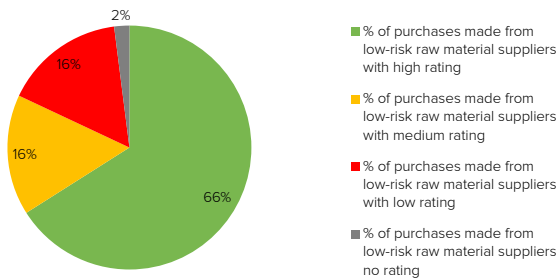

CHEMICALS

The coverage of the production has been calculated considering all meters of fabric outsourced to high risk subcontractors.

RAW MATERIALS

LOW-RISK RAW MATERIALS SUPPLIERS RATING

HIGH-RISK RAW MATERIALS SUPPLIERS RATING

PROCESS

CHEMICAL HIGH-RISK EXTERNAL PROCESSES SUBCONTRACTORS RATING

OUTPUT

EXTERNAL WASTEWATER

SUBCONTRACTOR 1

% OF EXTERNALISED PROCESSES: 90%

CETP (Central Effluent Treatment Plant)

MRSL Parameters - PRE-TREATMENT (Raw Wastewater)

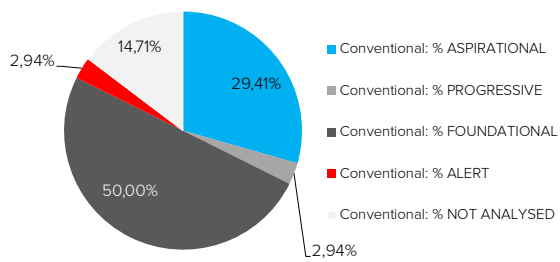

SUBCONTRACTOR 2

% OF EXTERNALISED PROCESSES: 4%

Internal Wastewater Treatment Plant

Conventional Parameters - POST-TREATMENT

MRSL Parameters - POST-TREATMENT
